

Backup Business Internet: Wireless WAN

Plan for the future with a **Wireless Wide Area Network (WAN)**

Wireless WAN is poised to take over T1 and coaxial connections as the backup WAN technology of choice in the U.S., and for good reason. At Digital Agent, we can use wireless WAN to replace more expensive backup Internet options while offering greater flexibility and reliability. Plus, when it's time to move or expand into a new space, we can quickly install wireless WAN to get you same-day internet while we work to set-up your primary fiber or coaxial connection.

WWAN is changing backup business internet

- Quick and easy install
- Reliable backup solution in case of outage
- Well-suited to remote or temporary work environments
- Unaffected by downed or cut wires
- Flexible and affordable
