Why HaaS?

What is HaaS?

Hardware as a Service (HaaS) is a third-party IT service that provides and maintains all of the technology a business needs to operate at a low monthly rate. This saves companies the substantial investment of buying their own equipment at face-value. It also takes the responsability of updating and upgrading these machines off of your shoulders and into the hands of your IT vendor.

Benefits of HaaS

- Low capital investment

- 24 / 7 troubleshooting & support

- Always up-to-date hardware

- Your own personal vCIO
